E. 次の文を読み、下の問いに答えなさい。

You probably hear the term "smartphone" tossed around a lot. But if you've ever wondered exactly what a smartphone is, well, you're not alone. How is a smartphone different (1) a cell phone, and what makes it so smart?

A smartphone is a mobile or cellular phone that runs off a mobile operating system (OS) and functions like a mini- computer. Smartphones also function as portable media players, digital cameras, video cameras and GPS navigational devices.

In short, a smartphone is a (ア) device that lets you make telephone calls, but also adds in features that, in the past, you would have found only on a personal digital assistant or a computer—such (2) the ability to send and receive e-mail and edit Office documents, for example.

(イ) Some young people think that they won't be able to survive one hour of their day without their smartphone, but realistically, a smartphone isn't a basic essential (3) living like water, food and sunlight. Your life can still be healthily and happily managed without a smartphone; however, a mobile device can variably and significantly enhance your life and keep you digitally relevant.
